

America's Diet ... is Deadly!

In the year of 1988, 1,200,000 Americans will be stricken with heart disease in one form or another. 1,000,000 will get cancer. By the year 2000, only 16 years away, it's estimated that over 100 million Americans could have some type of cancer.

Today:

1. 60 million Americans suffer from high blood pressure.
2. 75% of men and women who live past 65 have arthritis.
3. 50% of men and women who live past 65 have lost all their teeth.

The United States, the greatest nation in the world, is crumbling from the inside. We rank 13th in health world-wide for men, and 6th for women. How and why did this happen? The answers are simple, the solution's not as easy.

At the turn of the century, 33% of the population worked on a farm. We ate fresh "live" food, clean beef, chickens and pork. But with the first World War and the industrialization that took place, we settled in clusters that became super cities, 10-15 of them in all. To date, the farm workforce constitutes approximately 3%, down over 30%.

Larger farms became the answer, Many, run by corporations, had the money for expensive hybrid seeds, fertilizers, insecticides and enzymes for the crops. The food and soil became polluted with insecticides that, if purposely inhaled, could kill you. It's been reported that some new fertilizers are made with radioactive waste from nuclear plants.

The next step was the animal. They received quick-growth hormones. Chickens received amphetamines to lay more eggs. As of today, there are over 20,000 untested or unapproved drugs being used by farmers/ranchers on beef, sheep, chickens and Pork destined for human consumption.

The food Industry quickly needed the call for canned; jarred and frozen foods to meet the changing demands of the American consumer. Canned food was the answer for food storage and transportation. (As of 1987 the FDA has said yes to the giant food processors again! Soon our food will be radiated. Yes, they will bombard our food with radiation to preserve it forever! Of course It will be dead nutritionally, but alive with cancer. Have you had your cancer for breakfast?)

But milk was now becoming a problem. During the transportation from farm to city It would spoil or become infected with "poisons of the 'new' farms." No problem for the food Industry. They cooked, boiled and enriched it to nothing. Milk used to be a vital life force food, but it's practically useless in its present state.

So, now what was once good for us became poisoned, boiled, and canned. But there's more. They have to preserve the food somehow. After all, any food still shoved in a can is going to rot. right? Of course. Preservatives, additives, food flavorings, colorings, jellers, caklers, and stretchers became the answer. There are over 3000 food additives being used today by the giant food processors. Many of them do not have to be named on labels or even tested for safety. In some cases there can be as many as 600 flavorings used to create a desired taste destined for the American table. You may ask, "Are these 'things' bad for me?" Well, consider 70 years ago, Cancer hardly existed. Now it's becoming a social disease. Many of the preservatives being used by American food processors have been found to be carcinogenic. Carcinogenic means they have been proven to cause cancer in rats, mice, rabbits, dogs, cats or monkeys and baboons.

Many of the food additives we use are banned by Canada, Great Britain, France, U.S.S.R., Italy and other nations, to name only a few.

But why do food processors in our country get away with adding proven carcinogenics like sodium nitrite and nitrate, sodium carboxymethylcellulose and more to our food supply! I don't know. What do you think?

America, the land of the (poisoned) free? Special Interest groups helped push laws through Congress that make it illegal for me to tell you what vitamins will do for your body, how they can help. I can only suggest, possibly, might hopefully, etc. Not so many years ago, laws almost went into effect to outlaw the sale of vitamin C without a prescription. Today there are special Interest groups, that if they had their way, would totally ban the legal sale of vitamins by anyone other than a doctor. America the free, yes, for the rich, powerful conglomerates that can buy their own laws.

We at Organique are not only a natural food supplement company but a voice crying in the wilderness. It's time for a revolution of thought to take hold of Americans, now! Before all our rights are sold off to the highest bidder!
